

Technical Specifications (In-Cash Procurement)

Technical Specification-Technical Administration Support for Disruption Mitigation System (DMS)

The purpose of this technical specification (ITER_D_86PHWL) is to outline and define how the development of the Disruption Mitigation System (DMS) shall be supported towards the FDR.

This document concerns DMS technical administration, documentation and quality management activities performed for the DMS.

1 Purpose

The purpose of this technical specification (ITER_D_86PHWL) is to outline and define how the development of the Disruption Mitigation System (DMS) shall be supported towards the FDR.

2 Scope

This document concerns DMS technical administration, documentation and quality management activities performed for the DMS.

3 Definitions

For a complete list of ITER abbreviations see: [ITER Abbreviations \(ITER_D_2MU6W5\)](#).

Acronym	Meaning
ALARA	As Low As Reasonably Achievable
CAD	Computer Aided Design
DA	Domestic Agency
DET	Data Exchange Transfer
DFW	Diagnostic First Wall
DIR	Design Integration Review
DMS	Disruption Mitigation System
DSM	Diagnostic Shielding Module
EP	Equatorial port
FDR	Final Design Review
FP	First Plasma
HFE	Human Factors and Ergonomics
HIRA	Hazard Identification and Risk Assessment
HoF	Human Organizational Factor
IO	ITER Organization
ISS	Interspace Support Structure
ORE	Occupational Radiation Exposure
PCSS	Port Cell Support Structure
PDR	Preliminary Design Review
PFPO-1	Pre-Fusion Plasma Operation 1
PI	Port Integrator
PIA	Protection Important Activity
PIC	Protection Important Component
PP	Port Plug
RH	Remote Handling
RO	Responsible Officer
SDDR	Shutdown Dose Rate

5 Estimated Duration

The overall duration of this work is 12 months.

6 Work description

The work involves provision of technical expertise and to work together with the IO-TRO and the DMS design team primarily. It involves many areas of activity that have to be supported. Details on the specific work are listed in chapter 6.2

6.1 Introduction

The purpose of the ITER DMS is to provide machine protection in order to reduce the detrimental effects of plasma disruptions and to ensure the appropriate lifetime of all affected ITER components. It utilizes cryogenic hydrogen and neon pellets which are generated inside the injectors, which are located in the Interspace Support Structure (ISS). These pellets are pneumatically propelled, in the period of milliseconds, towards the plasma and, just before entering the plasma, they are shattered into small fragments so as to reduce damage to the plasma facing components and to other structures inside the ITER tokamak. The DMS is located in ITER ports on the equatorial level and the upper levels (see an example of the DMS integrated in the Equatorial Port (EP) #2 in fig. 1). All DMS units on the equatorial share a common and modular design and so do the units on the upper ports.

Figure 1 Typical DMS in EP integrated into the ISS and PCSS.

The ITER DMS is a large system with a total of 27 injectors distributed toroidally and poloidally in EP #02, EP#08, EP#17 and Upper Port (UP) #02, UP#08, UP#14. Each of these systems can be broken down into a series of work packages such as the Pellet Injector, Cryogenic System, Gas Handling System, Vacuum System and the Control System as shown in figure 2. Each of these work packages can be broken down further into individual components or assemblies.

There is no specific work package of interest for this contract since it is of transversal nature covering the collaboration with other IO and DA PBSs and enabling continuous information exchange. These transversal aspects also include documentation and quality management within the DMS team and other interfacing entities. A specific additional task is the organization and management of gate reviews and the associated chit resolution.

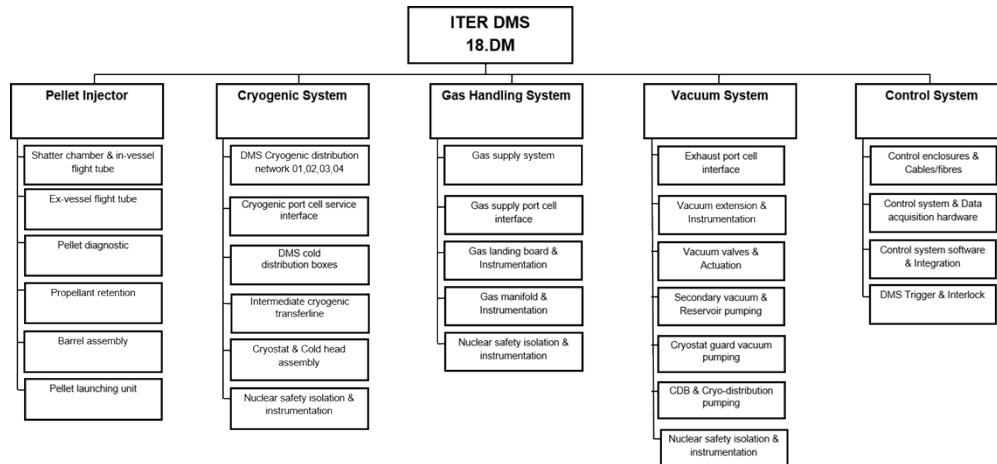

Figure 2 The DMS Plant Breakdown

6.2 Technical administration, documentation and quality management

The objective is to continuously support the DMS design. The list of specific and general activities expected to be performed is

- Liaising with Port Integration teams (IO and DA) to ensure proper documentation flow, regular uploading through IDM/PLM and action tracking, with required quality and according to schedule.
- Supports the qualification process of PIC and non-PIC components
- Organises, prepares and manages gate review meetings and associated chit resolution
- Supports DMS project change requests and liaise with the Central Integration Office (CIO)
- Documentation management of the DMS design team, including timely creation of agendas, minutes and actions of meeting and technical discussions as required by the IO quality process, supports sign-off follow-up, quality checks and regular updates;
- Organising progress meetings, supporting collection and follow-up of actions and publishing the minutes of meetings following IO rules and guidelines;
- Carrying out other related requests, upon line management request.

The Disruption Mitigation System (DMS) 18.DM is a rapidly growing system at post-CDR development level. The most critical areas for integration area is the shatter chamber in the DFW and its interfaces with the DFW and the DSM. The work on vacuum extensions is ongoing with support of maintenance and ORE assessments, and HOF analysis, provided by PBS 55 which bears the port integration in most DMS ports. A close collaboration with PBS 55 and continuous information exchange is therefore expected.

6.3 Engineering documentation and activities

Some of the technical documentation which maybe expected to be prepared are

- Interface Control Document (ICD)
- Interface Sheet (IS)
- Risk register
- Presentations
- Meeting Minutes
- Procurement and installation documentation

Furthermore it may be expected

- to provide advice on technical matters such as pressurised equipment, welding, NDT
- to participate in regular DMS group meetings;
- to participate in design and integration reviews;
- contribute or provide presentation related to component qualification;
- participate in the procurement and Installation process

7 Responsibilities

7.1 Contractor's obligations

In order to successfully perform the tasks in these Technical Specifications, the Contractor shall:

- Strictly implement the IO procedures, instructions and use templates;
- Provide experienced and trained resources to perform the tasks;
- Contractor's personnel shall possess the qualifications, professional competence and experience to carry out services in accordance with IO rules and procedures;
- Contractor's personnel shall be bound by the rules and regulations governing the IO ethics, safety and security IO rules.

The official language of the ITER project is English. Therefore, all input and output documentation relevant to this Contract shall be in English. The Contractor shall ensure that all the professionals in charge of the Contract have an adequate knowledge of English, to allow easy communication and adequate drafting of technical documentation. This requirement also applies to the Contractor's staff working at the ITER site or participating in meetings with the ITER Organization.

7.2 Obligations of the ITER Organization

The ITER Organization shall

- Nominate the Responsible Officer to manage the Contract;
- Organise regular meeting(s) on work performed;
- Provide offices at IO premises when required for in person meetings.

The ITER Organization shall in addition give the possibility to the contractor to review documents on the ITER documents database (IDM). Furthermore the IO shall make all

technical data and documents available to the Contractor which will be required to carry out its obligations in a timely manner.

8 List of deliverables and due dates

N°	Target date (months)	Deliverable description
D1	T0+3	Provide administrative and technical support and the completion of post PDR tasks. Support the preparations for the DMS FDR. Discuss and update task details with the IO RO and upload supporting description document in the IDM as per request. Provide a report on IDM summarising the work of this deliverable.
D2	T0+6	Provide administrative and technical support for the preparation and execution of the FDR. Discuss and update task details with the IO RO and upload supporting description document in the IDM as per request. Provide a report on IDM summarising the work of this deliverable.
D3	T0+9	Provide administrative and technical support to manage the FDR chits and participate in their resolution. Discuss and update task details with the IO RO and upload supporting description document in the IDM as per request. Provide a report on IDM summarising the work of this deliverable.
D4	T0+12	Provide administrative and technical support for the completion of the final design phase. Discuss and update task details with the IO RO and upload supporting description document in the IDM as per request. Provide a report on IDM summarising the work of this deliverable.

9 Acceptance Criteria

The deliverables will be posted in the Contractor's dedicated folder in IDM, and the acceptance by the IO will be recorded by the approval of the designated IO TRO. These criteria shall be the basis of acceptance by IO following the successful completion of the services. These will be in the form of reports as indicated in section 8, Table of deliverables.

10 Specific requirements and conditions

In order to complete the tasks in a timely manner the following skills are required:

- Ability to work with CATIA V5
- Ability to work with the ENOVIA database
- Experience with managing and organising gate reviews for complex projects

- Experience with documentation associated with ITER port plug design and tenant integration based on the IO integration approach (Equatorial ports as well as upper ports)
- Experience in quality management
- Experience with risk management
- Experience with Protection Important Equipment (PIC) according to the INB order 7th February 2012
- Experience with Pressure Equipment Directive (PED)
- Experience with welding and welding feasibility assessments
- Experience with Non Destructive Testing (NDT) of welds
- Experience in working with the ITER PLM

11 Work Monitoring / Meeting Schedule

Work is monitored through reports (see List of Deliverables section).

The Contractor will work predominantly off-site.

Note: The contractor will maybe asked to be present on the ITER site for in person meetings on short notice for a non-specific number of weekdays throughout the contract period.

12 Delivery time breakdown

T0 is the date of the contract signature. See Section 8 List *Deliverables section and due dates*.

13 Quality Assurance (QA) requirements

The organisation conducting these activities should have an ITER approved QA Program or an ISO 9001 accredited quality system.

The general requirements are detailed in [ITER Procurement Quality Requirements \(ITER_D_22MFG4\)](#).

Prior to commencement of the task, a Quality Plan must be submitted for IO approval giving evidence of the above and describing the organisation for this task; the skill of workers involved in the study; any anticipated sub-contractors; and giving details of who will be the independent checker of the activities (see [Procurement Requirements for Producing a Quality Plan \(ITER_D_22MFMW\)](#)).

Documentation developed as the result of this task shall be retained by the performer of the task or the DA organization for a minimum of 5 years and then may be discarded at the direction of the IO. The use of computer software to perform a safety basis task activity such as analysis and/or modelling, etc. shall be reviewed and approved by the IO prior to its use, in accordance with [Quality Assurance for ITER Safety Codes \(ITER_D_258LKL\)](#).

14 CAD Requirements (if applicable)

For the contracts where CAD design tasks are involved, the following shall apply:

The Supplier shall ensure that all designs, CAD data and drawings delivered to IO comply with the Procedure for the Usage of the ITER CAD Manual ([2F6FTX](#)), and with the Procedure for the Management of CAD Work & CAD Data (Models and Drawings [2DWU2M](#)).

Drawing Registration in the IO system shall be performed according to the Procedure for the Management of Diagrams and Drawings in pdf Format Using the SMDD Application ([KFMK2B](#)).

The reference scheme is for the Supplier to work in a fully synchronous manner on the ITER CAD platform (see detailed information about synchronous collaboration in the ITER [P7Q3J7](#) - Specification for CAD data Production in ITER direct contracts). This implies the usage of the CAD software versions as indicated in CAD Manual 07 - CAD Fact Sheet ([249WUL](#)) and the connection to one of the ITER project CAD data-bases. Any deviation against this requirement shall be defined in a Design Collaboration Implementation Form (DCIF) prepared and approved by DO and included in the call-for-tender package. Any cost or labour resulting from a deviation or non-conformance of the Supplier with regards to the CAD collaboration requirement shall be incurred by the Supplier.

15 Safety requirements

ITER is a Nuclear Facility identified in France by the number-*INB-174* (“Installation Nucléaire de Base”).

For Protection Important Components (PIC) the French Nuclear Regulation must be observed, in application of the Article 14 of the ITER Agreement.

In such case the Suppliers and Subcontractors must be informed that:

- The Order 7th February 2012 applies to all the components important for the protection (PIC) and the activities important for the protection (PIA).
- The compliance with the INB-order must be demonstrated in the chain of external contractors.
- In application of article II.2.5.4 of the Order 7th February 2012, contracted activities for supervision purposes are also subject to a supervision done by the Nuclear Operator.

For the Protection Important Components, structures and systems of the nuclear facility, and Protection Important Activities (as per *ITER D PSTTZL*) the contractor shall ensure that a specific management system is implemented for his own activities and for the activities done by any Supplier and Subcontractor following the requirements of the Order 7th February 2012 [11].

Compliance with *ITER D 45P8YK Defined requirements PBS 18 DMS* is mandatory.

Note: DMS Design activities are PIA

Refer the Quality class and Safety Class as per the SRD document (BEJQWA)
